

LSTMEncoder — Input & Output Flow

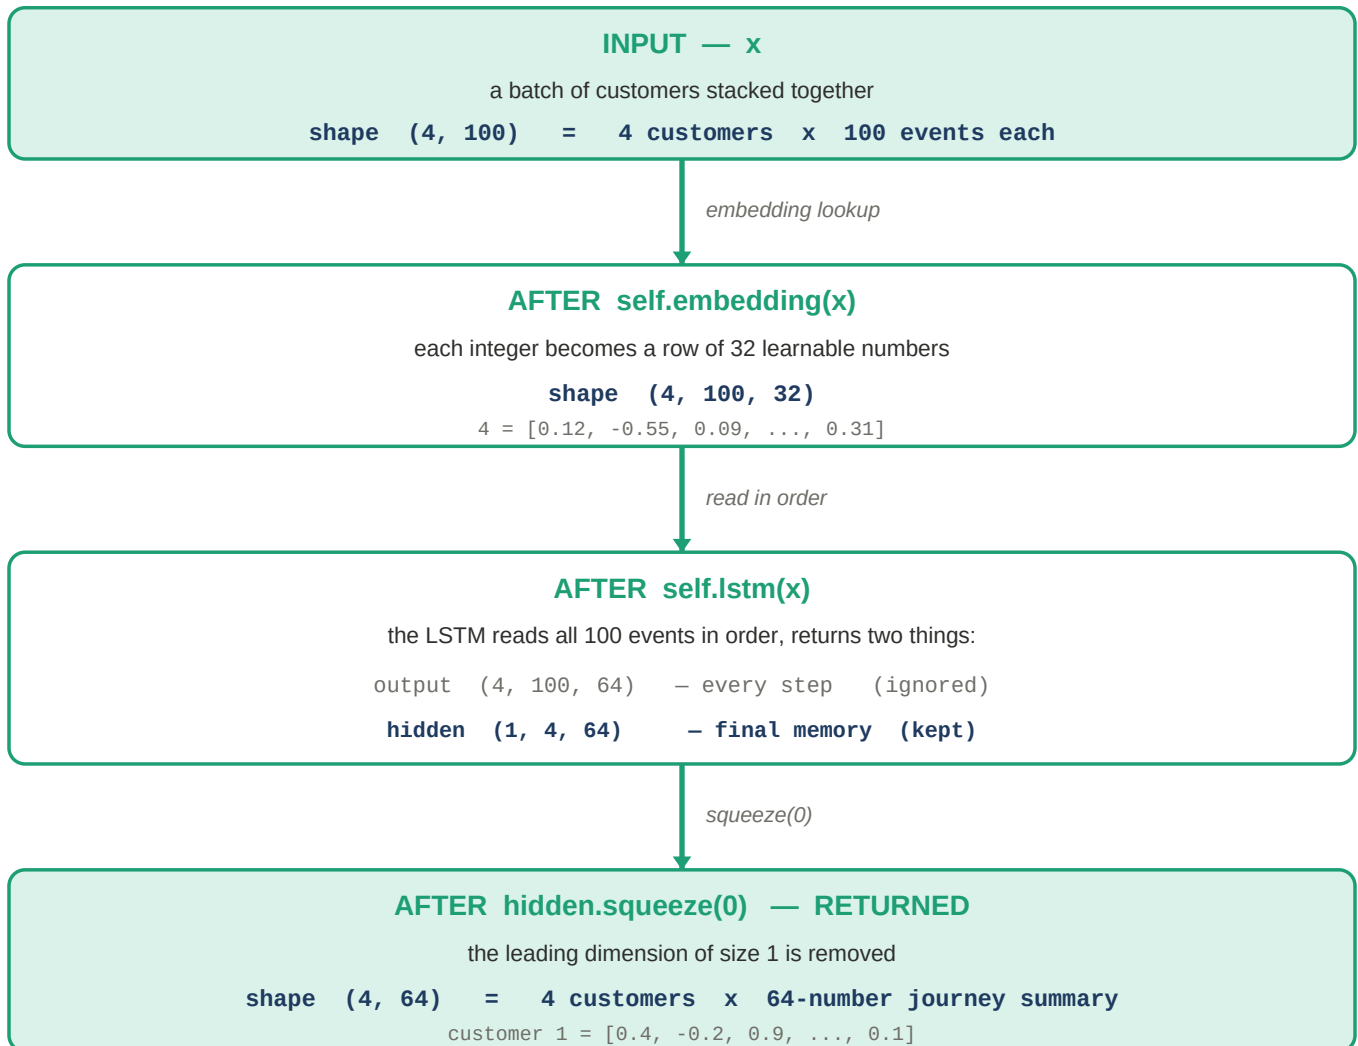

What goes in, and what comes out, at each line of forward()

STEP 0 — One customer's events (as integers)

Each number is one event, produced by the vocabulary in Phase 2.

shape (100,) — one customer = 100 integers, padded with 0s at the end

One-line takeaway:

(4, 100) -> (4, 100, 32) -> (4, 64)

Start: 4 customers as 100 raw integers. End: each squeezed into 64 numbers summarising their whole journey.
